value." What defines this upscale value is a combination of innovative and high-end features and a competitive price.

For example, all Polar boats have a "Plug & Play" electrical system that is unsurpassed in the industry. All electrical connections for devices such as pumps, lights, etc. utilize NMMA-certified marine grade automotive-style electrical harnesses with quick disconnects. Everything on a Polar boat that has power running to it has its own ground wire. You never have to chase a common ground wire problem again or risk losing two to three electrical auxiliaries at the same time. Even better is that a corrosion-proof printed circuit board backs the helm switches, eliminating one of the most common electrical problems found on boats these days.

Elevated consoles are another interesting feature. The console of every Polar boat is elevated via a riser in the cockpit sole which is thru-bolted to the console proper. This eliminates hull intrusion and the unsightly caulk line, which, as every boater knows, looks the best it is ever going to look the day the boat is purchased.

Features are important, but the real test occurs out on open water. Every center console and walkaround that Polar makes it built on top of a hull that is larger and steeper than most other boats of equal length. Add to this the characteristic Polar bow flare, and the result is a boat that looks, and performs, larger than it is. These boats ride high, dry, smooth and fast, and at a very competitive price. To have a closer look, contact one of the local dealers listed below.

The Most Popular Polar Models In Our Area

2300 Walkaround

• Extra wide cabin entry area: the oversized landing in combination with the extra wide entry provides a safety feature desired by boaters.
• Cabin head room exceeding 6 feet: no more head knockers!
• Fully fiberglass lined cabin: easy to clean and eliminates odors caused by fuzzy headliners.
• 48-gallon lighted baitwell/livewell: the high speed pick up system assures constant flow of new water keeping bait alive longer.
• Over 5 foot long cockpit fish boxes with macerators: plenty of room for lots of large fish.
• NMMA certified.

2100 Center Console

• Head in console with as much room as found on the 23 foot model.
• Abundant amount of storage, allowing all equipment to be stored, creating clean and uncluttered deck space.
• 48-gallon lighted baitwell/livewell: the largest found on any 21-foot center console.
• Transom door: inward opening transom door (normally not a design found on most 21-foot center consoles) allows easy and safe access to the integrated non-skid surface area.
• NMMA Certified.

2300 Center Console

• Maximized fish box capacity: a total of three insulated fish boxes, one forward of console (drains overboard) and two over 5 feet in length cockpit (with macerators).
• Head in Console: the lockable private spacious area can accommodate a porta potti or the optional vacuflush system.
• 48-gallon lighted baitwell/livewell: same system as featured on the 2300 walkaround is also a friendly fisherman's feature found on the center console model.
• The unique hull design can be rigged for dual or single engine application.
• NMMA Certified.

2700 Center Console

• Port and starboard lockable 9-foot rod storage racks
• Two bait prep stations one with freshwater wash down.
• Designated bumper storage.
• 50-gallon bait well with adjustable water level valve.
• Maximized Fish boxes: one oversized box is forward of the console equipped with macerator and two 7-footers are found aft in floor with macerators.
• Head in console: porta potti or optional vacuflush.
• Bilge access inside cockpit: an extremely large access door found in the stern of the cockpit gives you the yacht feel by allowing body access to all bilges and cut off valves. You will never have to reach over a fixed transom again.
• NMMA certified.
